AI stories from Guadeloupe

Guadeloupe country edition • Classroom and community reading

Two imagined local cases for readers to discuss. Each turns on a choice someone can make when a tool gives an answer that needs checking.

Two notices on the kitchen table

On Marie-Galante, Ana helps her aunt read two water notices. The first says work will finish at noon. The second gives a different time. Both have a map of Guadeloupe at the top. The family has one bucket left to fill.

Ana reads the small print. One notice came from another service area. The assistant that found it had matched the word Guadeloupe and stopped looking. Her aunt calls their own water desk and writes its answer beside their address.

Before lunch Ana makes a small card for the kitchen wall. It has space for the operator, the village and the date. A heading alone will never fill it.

> **Discuss.** Which three details would you check before passing the notice to a neighbour?

The truck that arrived on time

A cane collector lays a printed schedule on a pickup bonnet. The route assistant has moved one grower to the last run of the week. Its reason is a late delivery during the previous season. The grower unfolds a receipt showing the truck had reached the mill on the agreed day.

The dispatcher checks the mill log. Processing had stopped that afternoon. The recorded delivery time describes when the mill accepted the cane, hours after the truck joined the queue.

They put the grower back in the earlier slot. On the next trial run, the dispatcher keeps arrival and acceptance in separate columns and asks drivers to check both.

> **Discuss.** What would the dispatcher need to know before changing the grower’s next slot?
