Gi di reviewer power fi hold a decision

Adrian Dunkley | 2026-11-15

Di Council look pon whether di person checking a payment can stop it before di transfer. Di briefing compare simulated loss when staffing an shared failure change. Di money figure dem come from an example organisation.

Di Council look pon whether di person checking a payment can stop it before di transfer. Di briefing compare simulated loss when staffing an shared failure change. Di money figure dem come from an example organisation.

How dem do di work

Before a risk committee expand a pilot, dem can test approval time, shared failure an how far delegated action can go. Ask each process owner fi name di first action weh expensive fi reverse. An authorised reviewer haffi check di assumption behind it. Set a deadline an hold di action if di reviewer unavailable. Count check weh finish before execution separate from after-the-fact check.

Weh di example show

Inna Adrian Dunkley example, expert supervision bring expected annual loss down to US$317,000. Cut staff time an di share of review weh check critical assumption in half, an double di chance of shared failure, an expected loss reach US$447,000. Di human baseline did a US$431,000. Di loss level weh about 1% of simulated year go above rise from US$1.42 million to US$1.49 million under combined stress.

How fi use it an weh limit it have

Inna di test environment, simulate a supplier data feed or approval service weh fail. Count di action dem weh get affected, time how long fi stop an check if di rollback work. Before raising transaction limit, ask di person responsible fi sign off pon di remaining risk. Di linked model summary give di stress-test result.

Suos dem
